Dinamap V100 – Sample Library

18 .wav Files + .ods File List
96000 khz / 24 bit – Mono
Metadata added in WaveAgent

Thank you for downloading the Dinamap V100 Sample Library.
This library is one of small niche libraries I will be releasing at affordable price. The idea is instead of dozen of various machinery sounds you only get sounds by one machine. Therefor you only get what you need and pay less.

These 18 files were recorded of a Dinamap V100 medical device. Air is sent from the machine into a cuff attached to your arm to measure your blood pressure. It is an up to date machinery used in many hospitals.

If you need individual sfx or sample libraries (recorded or created) for your projects (game, feature film, advertisment, audio play...), please contact me at nils@itdmusic.com or 0049 (0) 1779419987.
